DETAILED ACTION

This Office Action is in response to the amendment filed August 13, 2010, amending claims 1 and 11. Claims 1-11 are pending.

Drawings

1. The drawings were received on August 13, 2010. These drawings are acceptable.

Allowable Subject Matter

2. Claims 1-11 are allowed.
3. The following is an examiner's statement of reasons for allowance:
4. Regarding claim 1, the prior art fails to specifically teach or disclose a method of compressing digital audio data and other data into an audio signal for transmission to a receiving station, comprising the steps of: a. dividing the audio signal into compression blocks, each compression block consisting of a plurality of compression packets, each compression packet consisting of a plurality of words, b. providing one word in each compression packet with a component of configuration data, whereby a compression block contains configuration information identifying a manner of packing data into the compression block, c. tagging one word in each compression packet to identify the tagged word as a word containing configuration information, d. packing compressed audio and other data into remaining space within the compression packet, and e. transmitting the compression packets in a predetermined sequence to a receiving station, wherein the receiving station constructs the configuration information from

the tagged words in a compression block and decodes the compressed audio data and other data according to the configuration information.

5. Regarding claim 11, the prior art fails to specifically teach or disclose an apparatus for adding digital audio data and other data into an audio signal for transmission to a receiving station, comprising: an encoder for dividing the audio signal into compression blocks, each compression block consisting of a plurality of compression packets, each compression packet consisting of a plurality of words, providing one word in each compression packet with a component of configuration data, whereby a compression block contains configuration information identifying a manner of packing data into the compression block, tagging one word in each compression packet to identify the tagged word as a word containing configuration information, and packing compressed audio and other data into remaining space within the compression packet, a transmitter for transmitting the compression packets in a predetermined sequence to a receiving station, and a decoder at the receiving station for constructing the configuration information from the tagged words in a compression block and decoding the compressed audio data and other data according to the configuration information.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
